Large scale mechanistic model that integrates knowledge of cancer signaling pathways

- ERBB, RAS, PI3-AKT + MYC/AP1 (orange)
  - Based on ConsensusPathDB
- 7 small molecule kinase inhibitors (purple)
  - 4.3 targets / drug on average
- 108 genes and 36 activating mutations
  - 1,228 species in 4 compartments
  - 2,686 reactions
  - 7 of 10 most frequent cancer driver mutations
- *Phenotypic model of cell viability as weighted sum of activities*
